

# MVerity Quick Start Guide

Thanks for participating in the MVerity Pilot Program! As soon as possible, please complete the following steps.

## 1. ADD A VEHICLE

Tap here to open the app menu. Then tap "Add Vehicle"

Type a name for your vehicle, like "Joe's Car" or "My Truck". Then tap "Save".

## 2. CAPTURE YOUR VIN (Vehicle Identification Number)

Your VIN is a 17-character combination of numbers and letters. You'll find it on a label somewhere on the driver-side door frame or door. Your VIN label looks something like this, and typically has a bar code on it:

On the main screen, tap the yellow "Add Your VIN Number" area and follow the on-screen instructions to either scan your VIN barcode or capture an image of the VIN label.

After MVerity processes your VIN (please allow up to 24 hours) your vehicle info Year, Make, and Model will appear on the main screen under the vehicle name. (Depending on your smartphone, you may need to logout/login to refresh the display with this info.)

## 3. CAPTURE YOUR ODOMETER IMAGE

Select a vehicle (tap the icon on the top left to open the app menu if needed), turn your vehicle "on" so you can see the odometer, then tap "Capture Odo-Foto" on the main screen.

When the image capture screen opens, place the odometer inside the brackets and allow the image to focus. Then, just tap anywhere on the screen to capture the image automatically. After MVerity processes the image (please allow up to 24 hours), the reading will appear on the main screen. (Depending on your smartphone, you may need to logout/login to refresh the display with this info.)
